INDEPENDENT ROLE DECK

Best Overall S&D; Loadouts

Five statistically selected complete classes for Global ranked Multiplayer at 100 HP — selected by job, not by popularity.

Best default: BAL-27

Prowl-IV Barrel / Clarent Light Stock / SL Razorhawk Laser Light / FSS Sharkfin 90 / Channel-M Grip

The least map-dependent class: suppressed, fast-killing, mobile, and usable across the sightlines that decide most ranked S&D; rounds.

216 ms	170 ms	278 ms
BAL through 28 m	Type 63 two-tap	3-Line fast ADS

Verified: July 29, 2026 Pacific · Season 6 “Take Your Heart” · Season 7 preview changes excluded · normal ranked rules.

Choose by the job

There is no honest universal winner. A weapon that dominates a ten-metre entry can be the wrong tool for a thirty-metre post-plant. This deck chooses one evidence-backed winner per S&D; job.

1 · BAL-27

Default flex. Copy this when the map or assignment is uncertain.

2 · Switchblade X9

Aggressive entry. Close routes, site breaks, and sniper punishment.

3 · Type 63

Precision anchor. Two-tap lanes and post-plant discipline.

4 · 3-Line Rifle

Sniper ceiling. Opening picks and long crosses.

5 · HS0405 slug

Tight-site specialist. Ranked-only precision one-shot inside 13 m.

Theoretical TTK formula: **(shots to kill − 1) × 60,000 ÷ RPM**. It excludes ADS, reaction time, latency, flinch, and misses.

1 · BAL-27

Best default flex

Gunsmith

1. Prowl-IV Barrel
2. Clarent Light Stock
3. SL Razorhawk Laser Light
4. FSS Sharkfin 90
5. Channel-M Grip

Complete class

Copy these slots

Secondary: Knife
Perks: Skulker / Ghost / Dead Silence
Wildcard: Perk Greed — Red; add Lightweight
Operator: Kinetic Armor
Lethal / Tactical: Frag / Trophy System
Streaks: UAV / Shock RC / Hunter Killer Drone

Best S&D; use

Take mixed 10–35 m fights, support the entry, rotate after a pick, or anchor without committing to a sniper.

Statistical case

At 833 RPM, four shots take **216.09 ms** and five take **288.12 ms**. The controlled build report places those clocks through about **28 m** and **46 m** above the legs. The corrected model returns **216 / 216 / 288 ms at 10 / 20 / 30 m**.

Tradeoff

The ADS laser is visible. Hide the beam on a frame or floor while holding; do not advertise the pre-aim.

2 · Switchblade X9

Best documented aggressive entry

Gunsmith

1. Monolithic Suppressor
2. MIP Light Barrel
3. OWC Laser - Tactical
4. OWC Skeleton Stock
5. Stippled Grip Tape

Complete class

Copy these slots

Secondary: Knife
Perks: Lightweight / Ghost / Dead Silence
Wildcard: Perk Greed — Red; add Skulker
Operator: Kinetic Armor
Lethal / Tactical: Semtex / Smoke
Streaks: UAV / Shock RC / Hunter Killer Drone

Best S&D; use

Block the long lane with smoke, then break a compact site or isolate a close defender. Use movement to choose the fight rather than forcing range.

Statistical case

Current profile: **27 / 22 / 18 / 15 damage**, **845 RPM**, and a **26-round magazine**. A close four-shot upper-body path is about **213.02 ms**; five shots take **284.02 ms**.

Tradeoff

It remains range and hit-zone sensitive, and its ADS laser is visible. The VMP can show a faster close clock, but its complete current public damage record is less dependable.

3 · Type 63

Best precision anchor

Gunsmith

1. GRU Silencer
2. 16.4" Titanium
3. KGB Pad
4. GRU Mag Clamp
5. Field Tape

Complete class

Copy these slots

Secondary: L-CAR 9 support build
Perks: Skulker / Ghost / Dead Silence
Wildcard: Perk Greed — Red; add Lightweight
Operator: Kinetic Armor
Lethal / Tactical: Trip Mine / Heartbeat Sensor
Streaks: UAV / Shock RC / Hunter Killer Drone

Best S&D; use

Hold a head-glitch, punish a predictable cross, or defend the planted bomb with disciplined two-tap fights.

Statistical case

Current profile: **63 damage through 38 m and 54 beyond**, **2× head multiplier**, and **353 RPM**. Two torso or arm hits take **169.97 ms**. One headshot exceeds 100 HP at every listed range. Titanium speeds the interval, but no trustworthy current percentage was found; the honest claim is therefore **no slower than 170 ms**.

Tradeoff

Leg hits reduce damage sharply. Semi-auto accuracy matters more than the paper clock; switch to L-CAR when a close opponent breaks the rhythm.

4 · 3-Line Rifle

Best evidenced sniper ceiling

Gunsmith

1. Maxim Silencer
2. EMPRESS 700MM TN02
3. ZAC CUSTOM MZ
4. SMLE Pistol Grip
5. .30-06 20 Round Mags

Complete class

Copy these slots

Secondary: L-CAR 9 support build
Perks: Skulker / Ghost / Dead Silence
Wildcard: Perk Greed — Red; add Lightweight
Operator: Kinetic Armor
Lethal / Tactical: Frag / Smoke
Streaks: UAV / Shock RC / Hunter Killer Drone

Best S&D; use

Take the opening pick, hold a long cross, or defend a planted bomb from range. Smoke is the escape tool after the first shot.

Statistical case

The current fast-build report combines approximately **278 ms ADS** with a one-shot zone covering everything except legs. That gives it the strongest sourced sniper ceiling in this comparison.

Pure-speed import

3-Line Rifle-1D2A4A7C8A
The source exposes the code but not a reliable five-name decode, so no attachment names are invented.

Tradeoff

The named build is the balanced suppressed default. The fast import code is a different speed configuration and should be verified in the training room.

5 · HS0405 + 500gr Slug

Best tight-site specialist — ordinary ranked only

Gunsmith

1. Choke
2. RTC Extended Light Barrel
3. No Stock
4. OWC Laser - Tactical
5. 500gr Slug

Complete class

Copy these slots

Secondary: L-CAR 9 support build
Perks: Lightweight / Ghost / Dead Silence
Wildcard: Perk Greed — Red; add Skulker
Operator: Kinetic Armor
Lethal / Tactical: Semtex / Flashbang
Streaks: UAV / Shock RC / Hunter Killer Drone

Best S&D; use

Hold a tight doorway or break a compact site after a flash. The slug is one projectile: aim centre mass and swap weapons immediately after a miss.

Statistical case

The sourced slug profile is **121 / 120 / 91 / 87 damage**. A torso hit one-shots through about **13 m**. At **47 RPM**, a miss creates **1,276.60 ms** before the next shot.

Tradeoff

Binary accuracy, a visible ADS laser, and brutal miss recovery. **Shotgun slugs are banned in the 2026 World Championship rules**; this class is for ordinary Global ranked only.

Shared support package

L-CAR 9 — no-laser S&D; adaptation

Gunsmith

1. YKM Integral Suppressor
2. Agile Stock
3. Field Agent Foregrip
4. Fast Extended Mag A
5. Rustle Grip Tape

Base profile: **26 / 22 / 15 damage**, **723 RPM**, 20-round magazine. Derived clocks: **249 ms** close four-shot, **332 ms** five-shot, **498 ms** seven-shot. Use it behind Type 63, 3-Line, and HS0405. BAL and Switchblade get a Knife because their primaries already cover panic fights.

Why these perks

One-life priorities

Ghost: protects route information from UAV.
Dead Silence: protects flanks and late-round movement.
Skulker: improves controlled ADS movement.
Lightweight: improves entry and rotation speed.

Perks, equipment, Operator Skill, and streaks are tactical inferences, not weapon-stat measurements.

Kinetic Armor: can absorb body-shot weapon damage but not headshots, melee, or explosive damage. It may not charge in short matches and is not part of the weapon ranking. Shared low-streak package: **UAV / Shock RC / Hunter Killer Drone**.

Verification and confidence

Five-minute training-room check

1. Set an MP practice target to 100 HP with no armor.

2. Test each class at 10, 20, 30, and 40 m.

3. Record ten torso-only trials at every relevant distance.

4. For Type 63, separate torso, headshot, and leg-hit tests.

5. Compare the named 3-Line build with import code 3-Line Rifle-1D2A4A7C8A.

6. Confirm the HS0405 torso one-shot edge near 13 m and practise the instant L-CAR swap.

7. Reject a class if its sight, laser, recoil animation, or latency costs more hits than the theoretical advantage saves.

What passed

Dataset QA

All five machine-readable datasets passed the ReconOS Gunsmith validator with **zero errors and zero warnings**.

The BAL-27 model was corrected so its +20% range modifier lands on the sourced **28 m / 46 m** built breakpoints instead of being counted twice.

High: live-version gate, TTK arithmetic, schema/slot validation.
Moderate: community numerical records, dated build pages, controlled player tests.
Low-to-moderate: undocumented attachment percentages, HS0405 adaptation, undecoded 3-Line fast-code parts.

Sources

Publisher sources establish the live version. Community numerical records and training-room reports are labeled with lower confidence.
