SEASON 6 DECISION GUIDE

Best S&D; Gunsmith

Locus, DL Q33, LK24, AK117, PP19 Bizon, and VMP compared for Global Multiplayer at 100 HP.

Use this first: LK24

Tactical Suppressor / OWC Marksman / No Stock / 40 Round Extended Mag / Granulated Grip Tape

This is the strongest balanced Search & Destroy choice from the six: suppressed, no visible ADS laser, controllable across mixed sightlines, and materially improved by the live Season 6 OWC Marksman buff.

191 ms	187 ms	100 HP
LK24 mixed 3-hit	VMP close 4-hit	test target

Scope: balanced S&D; flex, practical ranked ranges, chest-biased aim. Collected July 29, 2026 Pacific. Season 7 preview changes are excluded.

Why the LK24 wins

The fastest point-blank TTK is not automatically the best S&D; weapon. Rounds also reward clean first-shot placement, concealment, predictable recoil, and the ability to cover medium sightlines.

Live Season 6 damage change

OWC Marksman now uses a **1.6x head multiplier** and a **1.25x chest multiplier**. At the first damage band:

Mixed three-hit path

Head: 26 x 1.6 = 41.6
Chest: 26 x 1.25 = 32.5
Total: 41.6 + 32.5 + 32.5 = **106.6 damage**

At 628 RPM, that three-hit kill is about **191 ms**.

Pure chest hits take four shots, about **287 ms**. Using the published damage bands and the barrel's 35 percent range extension, four chest hits remain sufficient through roughly **52.7 m**. That distance has moderate confidence because the detailed range source is community-measured.

One practical substitution

If the standard iron sight interferes with centering, replace **40 Round Extended Mag** with **Classic Red Dot Sight**. Thirty rounds is normally sufficient for one S&D; round; target visibility is more valuable than ten extra rounds.

Role-based alternatives

Aggressive entry - VMP

1. Heavy Barrel
2. Rapid Fire
3. Bandit Adjustable Pad
4. VX Pineapple Grip
5. Phoenix Grip Set

Use: Fast entries and planned fights inside roughly 13 m.
Tradeoff: Current public data supports the close band, but not a trustworthy complete 20 m and 30 m damage profile.

Rapid Fire raises the sourced rate from 909 to 964 RPM. A four-shot close kill takes about **187 ms**, the fastest confirmed close automatic result here. Heavy Barrel offsets range loss and suppresses the weapon.

Aggressive sniper - Locus

1. YKM Lightweight Short
2. OWC Skeleton Stock
3. OWC Laser - Tactical
4. OWC Stopping Power Reload
5. Stippled Grip Tape

Use: Mobile quickscoping and rotating between angles.
Tradeoff: The ADS laser is visible. A miss creates about a 1.17 second follow-up window.

OWC Stopping Power expands the one-shot zone into the lower torso, but adds 5 percent to ADS time, reload time, and fire interval.

All six exact Gunsmiths

LK24 - balanced winner

1. Tactical Suppressor
2. OWC Marksman
3. No Stock
4. 40 Round Extended Mag
5. Granulated Grip Tape

Use: Balanced flex or anchor.
Tradeoff: Slower pure-body TTK than VMP or AK117. The base sight may need an optic.

AK117 - fast AR flex

1. Tactical Suppressor
2. OWC Skeleton Stock
3. Strike Foregrip
4. 40 Round Extended Mag
5. Granulated Grip Tape

Use: Fast upper-chest duels inside about 23 m.
Tradeoff: Randomized recoil and sharper damage drop reduce long-range dependability.

PP19 Bizon - easiest control

1. Monolithic Suppressor
2. OWC Marksman
3. No Stock
4. Large Caliber Ammo A
5. Granulated Grip Tape

Use: Forgiving entry or flex play.
Tradeoff: Slower duel speed. Large Caliber reduces range while correcting leg damage.

All six exact Gunsmiths

VMP - aggressive entry

1. Heavy Barrel
2. Rapid Fire
3. Bandit Adjustable Pad
4. VX Pineapple Grip
5. Phoenix Grip Set

Use: Close-range route planning and fast entries.
Tradeoff: Range-dependent, with incomplete public live damage bands.

Locus - mobile sniper

1. YKM Lightweight Short
2. OWC Skeleton Stock
3. OWC Laser - Tactical
4. OWC Stopping Power Reload
5. Stippled Grip Tape

Use: Aggressive sniping.
Tradeoff: Visible ADS laser and slow miss recovery.

DL Q33 - hitbox-first sniper

1. MIP Light
2. YKM Combat Stock
3. OWC Laser - Tactical
4. Sleight of Hand
5. Extended Mag A

Use: Holding lanes with a naturally reliable torso-and-arms one-shot zone.
Tradeoff: Less mobile, visible ADS laser, and no suppression.

Current statistics snapshot

Locus

95 base damage | 54 RPM | 8 rounds | 3.65 s reload
1.5x upper body. One shot in the valid zone. About 1.17 s follow-up with Stopping Power.

DL Q33

90 base damage | 53.57 RPM | 6 rounds | 3.10 / 3.40 s reload
1.67x torso and arms. One shot in the valid zone. About 1.12 s follow-up.

LK24

26 / 22 / 20 / 18 measured bands | 628 RPM | 30 rounds | 1.95 / 2.50 s reload
About 191 ms for one head plus two chest hits; about 287 ms for four chest hits.

AK117

25 / 24 / 19 / 15 | 769 RPM | 30 rounds | 1.47 / 1.76 s reload-cancel values
About 234 ms for four upper-chest hits at 10-20 m; about 312 ms at 30 m.

PP19 Bizon

28 / 24 / 22 / 16 | 652 RPM | 64 rounds | 1.80 / 2.80 s reload
About 276 ms for four chest hits through roughly 30 m with the listed build.

VMP

25 close band verified | 909 RPM; 964 with Rapid Fire | 40 rounds | 1.14 / 1.46 s reload
About 187 ms for a four-shot close kill. Later-band TTK is intentionally withheld.

Five-minute verification drill

1. Set an MP practice target to 100 HP with no armor.

2. Equip the recommended LK24 build.

3. Test 10, 20, 30, 40, and 50 m.

4. At each distance, fire ten pure-chest groups.

5. Then test ten groups containing one headshot and two chest shots.

6. Check recoil centering and whether the iron sight obscures the target.

7. If the sight costs hits, replace the 40 Round Extended Mag with Classic Red Dot Sight.

Confidence and limits

High confidence: Season 6 is live; the exact LK24 OWC Marksman head and chest changes; mathematical TTK derived from cited RPM and damage.

Moderate confidence: community-maintained base weapon values and dated training-range measurements.

Low-to-moderate confidence: current VMP practical attachment consensus. Only its sourced close-range calculation is used.

Formula: **(shots to kill - 1) x 60,000 / RPM**. A sniper one-shot has zero theoretical post-trigger TTK; actual performance depends on ADS, hitbox, flinch, and accuracy.

Sources

Publisher sources establish the live version. Numerical weapon pages and training-range measurements are kept separate and labeled with lower confidence.
